

Future agenda: make each reported number auditable

Benchmarking

- registered splits
- multi-dataset leaderboards
- chance-normalized metrics

Statistics

- subject-level uncertainty
- multilevel synthesis
- outlier diagnostics

Models

- source-only DG
- uncertainty-aware adaptation
- subject-conditioned reps

Reproducibility

- open code and folds
- preprocessing provenance
- leakage audit

Every claim should state the problem solved, target access used, and uncertainty around the estimate.
